

A SIMPLE SWITCH. A SMARTER LOCK.

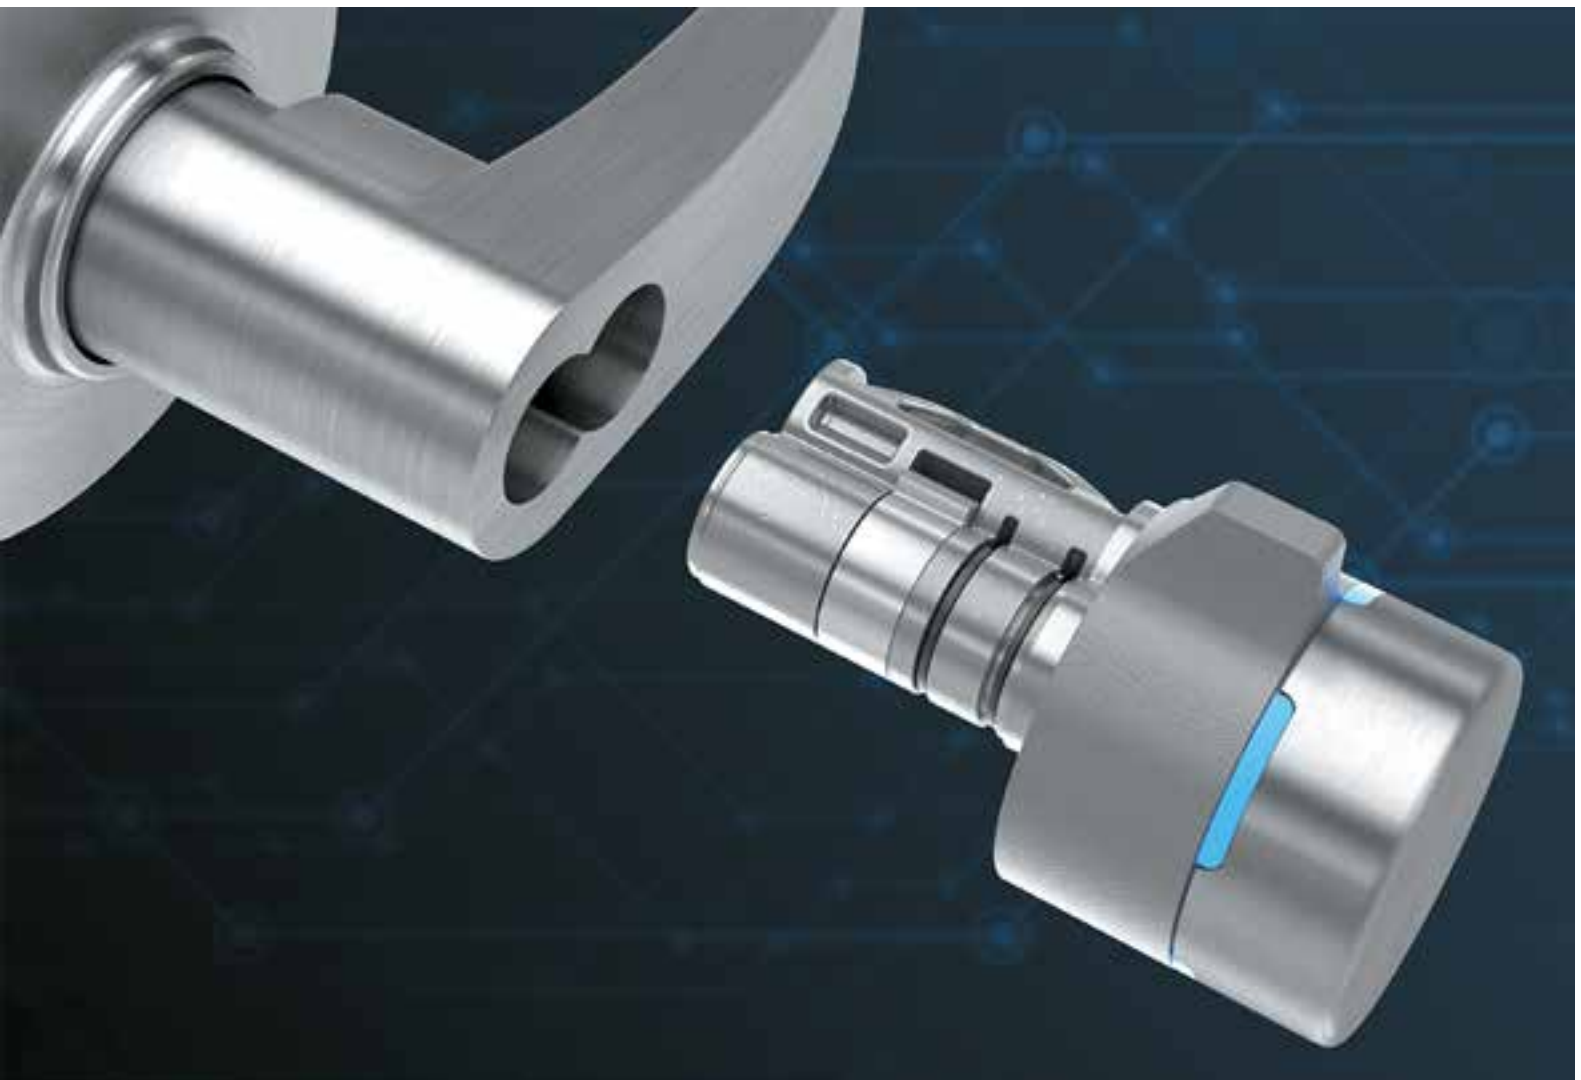

**SWITCH
CORE**

SWITCH TECH.

IT'S MECHANICAL MADE DIGITAL, MADE EASY.

We developed Switch™ Tech to make electronic access control affordable and easy to scale across any facility. You get greater control and visibility of access without needing to replace the door hardware you already have installed.

DIGITAL
IS THE ANSWER.

Small format interchangeable cores revolutionized locks, and remain vital to security. That said, key management can be time intensive and costly, and mechanical locks can't offer the level of access control and visibility you get from digital. Enter Switch Core.

SWITCHING
IS THE SOLUTION.

In just a few minutes, you can install the Switch Core into an existing lockset, then manage users' access via an app on their mobile phones. You gain the primary advantages of access control—easy management and event visibility—in a snap.

"RETROFIT" SOUNDS HARD. THAT'S WHY WE CALL IT "SWITCH."

SWITCH™ TECH

Get full access control by simply switching out your current small format interchangeable cores. It's simple. It's cost-effective. And best of all, it works for most any door with an SFIC-secured lock.

DON'T BREAK THE BANK.

Retrofit multiple doors with Switch Core for the price of a single electronic lock. There's no major hardware to purchase and no installation cost. Plus, it eliminates the time and cost of managing and replacing physical keys or re-keying doors when a key is lost.

INSTALL IN MINUTES.

Most electronic systems require replacing the entire lockset, and may even need to be wired in. With Switch Core you only trade out the lockset's core, leaving the rest intact. Its long-lasting battery is low maintenance.

SCALE AND ADAPT SIMPLY.

We know your facility's environments change over time. Since the Switch Core changes out in just a few minutes and new credentials are simple to generate, you can easily add more doors to the system or change the ones you control.

KEEP IT CONVENIENT.

Make it easy for the right people to access what they need, without needing to carry a key or memorize an entry code. They simply access doors with a Bluetooth-secured credential stored on their fob or in an app on their mobile phone. You manage and monitor via your ACS.

KNOW WHO'S COMING AND GOING.

Switch Core tracks access data and sends it via the user's mobile phone through our cloud system to your ACS. This means admins can review audits and know whose device was used for access to which door, when. In real time.

GET A LA CARTE CONTROL AND SYSTEM INTEGRATION.

Switch Core is powered by a cloud-based software Switch Deck, which enables you to generate credentials and connects to your access control system for assigning or reassigning credentials on the fly.

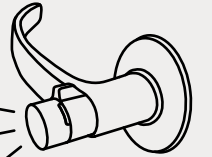

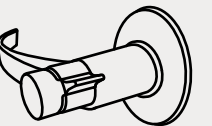

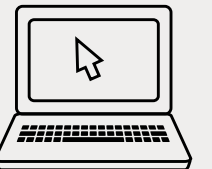

SECURITY WITH GREATER VERSATILITY.

Credentials are subscription-based and can be assigned and reassigned at no added cost. Stored locally on the mobile app, the credential is relayed to the core via a secure Bluetooth signal. The app offers passive, active and two-factor authentication modes.

DESIGNED SMART, BUILT DURABLE.

Switching to Switch Core doesn't compromise the integrity and security of the original lock. Its hardened steel case protects locking intelligence and easily exceeds Grade 1 standards for durability.

WORKS LIKE A KEY, THINKS LIKE A BOT.

- 1 Switch Tech mobile phone app or fob emits Bluetooth signal to communicate with core. 
- 2 Touch the Switch Core to wake it, a green light indicates access. 
- 3 Twist to unlock like you'd twist a physical key, then open the door. 
- 4 Access is recorded and audits are sent back to your ACS for monitoring. 

COMES COMPLETE AND INTEGRATES COMPLETELY.

Switch Deck cloud is included with your system and is linked to your ACS via a secure bridge, Switch Bridge. Switch Deck enables admins to generate credentials, manage text and email notifications (like low battery), approve firmware updates and more. Meanwhile, monitoring and managing—including assigning and reassigning credentials—can be done through your ACS.

SWITCHING TO DIGITAL IS A SNAP.

Simply pop out the SFIC in your cylindrical, mortise, padlock or case lock and snap Switch Core in place. Fits most major brands including BEST, Schlage, Corbin Russwin, Yale and Sargent. And it installs in less than five minutes, after which generating credentials is done with a few keystrokes.

THE SWITCH ROI: TIME, MONEY, SECURITY, SUPPORT.

With Switch Tech packed into every powerful Switch Core, you can go about business as usual—knowing a smart digital access system has your back.

Save time on installation and access management.

Skip the cost of electronic access hardware.

Secure sensitive areas, items and information.

Support comes from a nationwide network of experts.
